

Outline for a two-day training module on Participatory Market System Development (PMSD) approach for waste value chain:

Day 1:

Session 1: Introduction to Participatory Market System Development (PMSD) Approach

- Understanding the principles and benefits of PMSD approach
- Overview of the waste value chain and its components
- Introduction to market systems and market actors

Session 2: Market Assessment

- Methods for conducting market assessments in waste value chain
- Identifying market opportunities and constraints
- Developing a market map and value chain analysis

Session 3: Market Facilitation and Interventions

- Understanding the role of market facilitation in waste value chain
- Identifying potential market interventions and their impact
- Developing intervention strategies for market actors

Day 2:

Session 4: Partnership Development

- Understanding the importance of partnerships in PMSD approach for waste value chain
- Developing partnership strategies and identifying potential partners
- Strategies for building effective partnerships

Session 5: Implementation and Monitoring

- Developing implementation plans for market interventions
- Understanding the importance of monitoring and evaluation in PMSD approach
- Developing monitoring and evaluation plans for market interventions

Session 6: Scaling Up and Sustainability

- Strategies for scaling up market interventions
- Developing sustainability plans for market interventions
- Identifying opportunities for replicating successful interventions

The training module can be designed to include interactive activities, group discussions, and case studies to make it more engaging and interactive for the participants. The module can also include site visits to waste management facilities and marketplaces to provide a practical understanding of the waste value chain and market systems.
