

## **Outline of a two days training module for Carbon Trading (CDM) planning**

### **Day 1:**

#### **Session 1: Introduction to Carbon Trading and CDM**

- Understanding the concept of carbon trading
- Overview of the Clean Development Mechanism (CDM) and its principles
- Introduction to greenhouse gas emissions and carbon credits

#### **Session 2: CDM Project Cycle and Project Design Document**

- Understanding the CDM project cycle and its phases
- Developing a project design document (PDD) for CDM projects
- Identifying and addressing environmental and social impacts

#### **Session 3: Additionality and Baseline Setting**

- Understanding the concept of additionality in CDM projects
- Developing baseline scenarios and setting additionality criteria
- Identifying and addressing potential leakage and non-permanence issues

### **Day 2:**

#### **Session 4: Monitoring, Verification and Certification**

- Understanding the monitoring and verification process in CDM projects
- Developing a monitoring plan and identifying key performance indicators
- Understanding the certification process and obtaining carbon credits

#### **Session 5: Carbon Market and Trading**

- Understanding the carbon market and carbon credit trading
- Identifying buyers and sellers in the carbon market
- Understanding the role of carbon trading in climate change mitigation

#### **Session 6: CDM Project Development and Implementation**

- Developing a CDM project development plan
- Identifying financing and partnership opportunities
- Addressing potential barriers and risks in CDM project implementation

The training module can be designed to include interactive activities, group discussions, and case studies to make it more engaging and interactive for the participants. The module can also include site visits to CDM project sites and carbon trading platforms to provide a practical understanding of the CDM project cycle and carbon market trading.
